VVAAS

What's New in 2024

Student Projections Updates

With the 2023-24 reporting release, VVAAS will now provide student projections two years out in addition to one year out. For example, a student who last tested in fifth grade will have a sixth-grade projection as well as a seventh-grade projection. In addition, student projections can now be exported. Student projections are available to users who have Student Report access.

Grade 8 Writing Updates

Starting with the 2023-24 reporting release, Grade 8 Writing assessment data and student projections will no longer be added to the VVAAS website. Previous Grade 8 Writing measures will still be available in the Growth, Diagnostic, and Student Reports.

PALS Assessment Updates

With the 2023-24 reporting release, PALS measures and assessment data will no longer be included on the VVAAS website.

Redesign of Scatterplot Reports

The new scatterplot design emphasizes accessibility, aesthetic appeal, and user-friendliness. Using a similar design to the Growth and Diagnostic Reports, the filter panel on this report allows different options for users to compare two variables for a selected test, subject, and year. This redesign also includes a download functionality, enhanced comparison features, and the ability to add or remove specific groups of data on the graph. To learn more, visit the Scatterplot Desk Reference on the VVAAS login page and the Scatterplot Guided Tour on the e-Learning tab.

Single Sign-On (SSO) Transition

VVAAS is transitioning divisions to SSO to ease access to the site. To learn more about the most recent list of divisions that have transitioned, click here.
